10 Symptoms of Caregiver Stress

If you experience any of these signs of stress on a regular basis, make time to talk to your doctor.

1. Denial about the disease and its effect on the person who’s been diagnosed: I know Mom is going to get better.

2. Anger at the person with Alzheimer’s or others. Anger that no cure exists or anger that people don’t understand what’s happening: If he asks me that question one more time, I’ll scream!

3. Social withdrawal from friends and activities that once brought pleasure: I don’t care about getting together with the neighbors anymore.

4. Anxiety about facing another day and what the future holds: What happens when he needs more care than I can provide?

5. Depression that begins to break your spirit and affects your ability to cope: I don’t care anymore.

6. Exhaustion that makes it nearly impossible to complete necessary daily tasks: I’m too tired for this.

7. Sleeplessness caused by a never-ending list of concerns: What if she wanders out of the house or falls and hurts herself?

8. Irritability that leads to moodiness and triggers negative responses and actions: Leave me alone!

9. Lack of concentration that makes it difficult to perform familiar tasks: I was so busy, I forgot we had an appointment.

10. Health problems that begin to take their toll, both mentally and physically: I can’t remember the last time I felt good.
